It might not be such a novelty 20 years from now, but it's definitely going to be nowhere near the norm for TVs, so it's not going to be as big a deal then. Evan L (it) wrote: A middle-of-the-road comedy that doesn't feel like it's taken itself too seriously. The plot has two halves, one of which plays out in 2D while the other is given the full 3D treatment. The movie is ultimately a success and offers solid laughs, but it's the effects that really keep you engaged in the action. Many scenes rely on a combination of good CGI and big, creative production design.

I'm curious to see the story in 3D once the television version comes out on the Disney Channel. This movie has much more of a holiday feel than I expected, and I look forward to more films like this. Thomas A (au) wrote: A very interesting story and direction, and a very cool technology. Stereoscopic 3D is just a great bonus, even when playing in 2D. Very interesting to see in this movie how a 3D production is made, and it was one of the better 3D movies I've seen. The story line is very interesting, and it's one of those rare movies where the writing and directing truly shines through. Keep an eye on this one! mike S (ru) wrote: The cast and story are very good for the first season, but it takes a long time to get into the story, which is more focused on the personalities of the cast members rather than the supernatural occurrences. The first season is rather slow-paced, so it's important to stick with it and be patient if you want to get the full value of the show. As it is, I think the show's pacing could have been better. The show is fairly interesting, but the pilot episodes aren't all that good. Andrew K (kr) wrote 82157476af
